

How does it work?

The Capacitor Wizard® Reads ESR

Capacitors over 1uf generally fail because:

- 1) The electrolyte dries out
- 2) Dielectric changes
- 3) Capacitor chemistry changes
- 4) Leads break internally/externally

Listed above are common capacitor failure modes. All cause a significant increase in ESR (Equivalent Series Resistance). The Capacitor Wizard® detects this increase in ESR indicating the capacitor is bad - even if the bad part's capacitance is normal! The Capacitor Wizard® won't be fooled!!

Unique Features

- ✓ Fast analog meter
- ✓ **BAD COMPARE GOOD** scale
- ✓ Beeps when cap is GOOD
- ✓ Long, tangle free probes
- ✓ Needle sharp tips never slip
- ✓ Fastest in-circuit cap meter made!

When you own a Capacitor Wizard® you can...

- ▶ Spot bad capacitors INSTANTLY IN-CIRCUIT
- ▶ Repair in MINUTES what takes others HOURS
- ▶ Tame TOUGH DOGS quickly
- ▶ Improve repair RELIABILITY
- ▶ Find capacitors on the verge of failure
- ▶ Reduce repair time by up to 90%
- ▶ First sold in 1995, it has passed the test of time

Why Buy a Capacitor Wizard®?

Because Capacitance Meters can be Misleading!!

Stop wasting your time checking capacitance!! Seasoned technicians know BAD capacitors often measure NORMAL capacitance. Use a Capacitor Wizard® and **AVOID THIS TRAP!!** The Capacitor Wizard® is not a "capacitance" meter. The Capacitor Wizard® determines a capacitor's health by it's ESR magnitude, not capacitance! ESR is the first and often **ONLY** indicator of a bad capacitor. The Capacitor Wizard® will save a busy technician hours of troubleshooting time. **Less repair time translates into \$\$\$ savings for you!**

Capacitor Wizard® Owners say.....

"After using the Capacitor Wizard® I was STUNNED to find I'd missed so many bad capacitors over the years. I even found bad NEW ones!"

"It's TRUE! My technicians fix in minutes what took hours before. Please send 6 more".

It's the best money I've spent on test equipment in YEARS!"

"I found bad caps as soon as I took it out of the box! Didn't even look at the book. Great product!"

5/18/2011
"Dear Doug,
I just got my Cap Wiz and **it's already paid for it's self the first day!** Had a +-15 volt switch mode supply, no output on the rails, IC / FET would not switch, tested all caps, two 47 mfd 63 V caps indicated bad on the Cap Wiz (>15 Ohms), known good caps tested < 0.75 Ohms, replaced the two and wah lah,,,all is good!!

Thanks for your help!!!
